# What is a bounty?

Money or reward  
offered for the capture  
of a **person** or **thing**

## Reward

Help us find our beloved family pet  
Wearing a red bandanna around neck  
Last seen near City Lake Park  
Answers to "Tater" or "Daddy's Boy"

Call Anytime!  
000-000-0000  
Ask for Bob or Joan

# What is a bug bounty?

Puppy == Bug (aka: security vulnerability)

Organizations announce intent to pay for the discovery of security bugs in their products/services.

# Web and Services Bug Bounty Program

## Introduction

The Mozilla Web Application Security Bug Bounty Program is designed to encourage security research in Mozilla websites and services and to reward those who help us protect Mozilla users data.

## General Bounty Guidelines

Mozilla will pay a bounty for certain website and service security bugs, as detailed below. All security bugs must follow the following general criteria to be eligible:

- Security bug must be original and previously unreported.
- Security bug must be a remote exploit, compromise user data, allow access to Mozilla infrastructure or resources, or easily manipulate a user.
- Submitter must not be the author of the buggy code nor otherwise involved in its contribution to the Mozilla project (such as by providing check-in reviews).
- Employees of the Mozilla Foundation and its subsidiaries are ineligible.
- Community volunteer members involved with bug handling/who have security bug access are not eligible during their period of involvement.

If two or more people report the bug together, or working independently at approximately the same time, the reward will be divided between them.

# Bounty Ubiquity

## The History of Bug Bounties: Abbreviated Timeline from 1995 to Present

***“Why run a bug bounty?”***

**PROTECT USERS**

A top-down view of a wooden table with several hands interacting with various objects. At the top, hands are moving wooden blocks, some of which are arranged in a semi-circle. In the center, the word "COMMUNITY" is written in large, white, hand-drawn letters. Below the text, a cluster of white puzzle pieces is scattered. On the left, a hand holds a notebook with a bar chart, a math problem, and a circular diagram. On the right, a hand holds a notebook with a lightbulb drawing and a red stamp. Colored pencils are scattered around the notebooks. The background is a dark, textured wooden surface.

***“How to run a  
good bounty?”***

# Have a Bounty Committee

- A group of trusted individuals to govern the program
- Membership consists of representatives of affected products
- Meet regularly to discuss bugs that have been nominated for payment (all bugs submit via bounty program are nominated)

# Do Bounty Triage

- Make it clear who's responsible for triaging a bug
- Need to be very technical
- Have an SLA (< 1 business day)
- Ensure that you understand impact as soon as possible
- Consider a triage rotation

**Example:** [https://wiki.mozilla.org/Security/Web\\_Bug\\_Rotation](https://wiki.mozilla.org/Security/Web_Bug_Rotation)

# Severity Levels

- Establish a ranking scale for evaluating the impact of security bugs.
- Easier to set expectations with stakeholders.

**Example:** [https://wiki.mozilla.org/WebAppSec/Web\\_App\\_Severity\\_Ratings#Severity\\_Ratings](https://wiki.mozilla.org/WebAppSec/Web_App_Severity_Ratings#Severity_Ratings)

# Acknowledgement

- **Must quickly acknowledge and thank every person who submits a bounty**
- **Demonstrates that you value their contribution**
- **In cases where a bounty is awarded, make sure to expedite payment**
  - **positive re-enforcement**
  - **increases chances to future participation**

# Patience

- You will get “bad” submissions
  - offensive language
  - misunderstandings
  - ~30 min ransom videos
  - demands for payment
  - disrespect
- Keep your cool and keep it professional
- Be willing to adapt the program or guidance as needed

# Transparency/Openness

- Involving bounty hunters in the solution (part of the workflow)
- They participate in communications with developers, service owners, etc.
- Rarely have to wonder about lack of status
- We make bounty bugs public after they are fixed!

**Example:** [https://bugzilla.mozilla.org/show\\_bug.cgi?id=1293111](https://bugzilla.mozilla.org/show_bug.cgi?id=1293111)

# Feedback to Security Program

- Looking at trends in the bounty program
- Figuring out ways to squash entire classes of bugs
  - Examples
    - [https://wiki.mozilla.org/Security/Server\\_Side\\_TLS](https://wiki.mozilla.org/Security/Server_Side_TLS)
    - [https://wiki.mozilla.org/Security/Guidelines/Web\\_Security](https://wiki.mozilla.org/Security/Guidelines/Web_Security)
    - <https://wiki.mozilla.org/Security/Guidelines/OpenSSH>
    - <https://observatory.mozilla.org/>
- If you aren't using bounty results to shape your security program, you're leaving value on the table

***“How to be a good  
bounty hunter?”***

# Proof of Concept

- Providing a clear proof of concept
- This should include...
  - a clear description of the problem
  - steps for **safe** reproduction
  - why it's an issue
- Try to describe threat scenarios to help impact assessment.
  -

# Follow Instructions

- Every bounty program is a little bit different
- If you're going to work with a new program, read their instructions
- Our most successful bounty hunters read our guidelines carefully to ensure successful results
  - Examples
    - Eligible sites
    - Vulnerability Classes

## Example:

<https://www.mozilla.org/en-US/security/bug-bounty/faq-we-bapp/>

# Ask Questions

- Our most successful bounty hunters ask a lot of questions
- **Why?**
  - Context is important
  - Better understand impact drivers
  - Helps to continually refine your focus (different orgs have different weaknesses)
  - Understand why the issue happens and you might find other bug classes

# Obscure Bug Classes

- **Work on bug classes that are less common**
  - You have less competition with other bounty hunters
  - Better chance it was missed
  - It's fun to work on something different
- **Example**
  - **Hostile Subdomain Takeover Vulnerabilities**

# Be Nice, Or Leave

- Remember that you are criticising someone else's hard work
- Try to remain professional
- If you build a strong reputation with the bounty team, you increases chances of...
  - Public acknowledgement
  - Fix/Bounty payout
  - Job offers
  - Shape the program

# *Success Story*

*Affected 50+ domains...*

## Bug 1267546 - Subdomain takeover via Github Pages - \*.fxosapps.org ([edit](#))

**Status:** RESOLVED FIXED ([edit](#))
